## Market Update

**embertec**<sup>®</sup>

☺ **Work paper on Embertec Tier 2 AV APS approved by the CPUC – September 2015**

 Approved CPUC Workpaper (Sept 2015)

☺ **Tier 2 IT APS work paper approved by CalTF**

☺ **California Bills Recently Passed**

- AB 802 – Focus on improved tracking and bench marking
- SB 350 – Focus on doubling energy efficiency gains

☺ **Illinois moving forward with TRM inclusion of Tier 2 APS**

# Illinois TRM

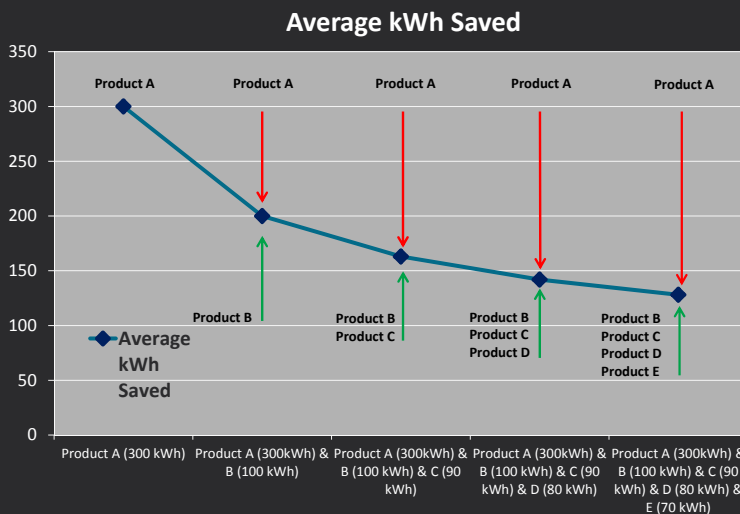

- Illinois have utilized the work from California to assist in their assessment of the Tier 2 APS product category
- Extensive debate on the 27<sup>th</sup> of October around how to assess this new category of Tier 2 APS products given variations in sensing, control and software approaches.
- This is a similar challenge to managing variations in algorithms in controllable thermostats
- Illinois Stakeholder Advisory Group (SAG) determined that the best approach is to assess products based on individual performance to incentivize innovation.

# Averaging Energy Savings Across Products Lowers Program Performance

Commercial in Confidence

4

## The Effect of Averaging Energy Savings Between Different Tier 2 APS

- ⊖ It entrenches free-ridership by product manufacturers into the activity category with the lower performing Tier 2 APS free-riding on the higher performing devices - with numerous additional negative effects...
- ⊖ Averaging also punishes the higher performing Tier 2 APS and rewards the lower performing Tier 2 APS
- ⊖ Averaging stifles Tier 2 APS Innovation towards better product design and higher energy savings in the plug load arena
- ⊖ Averaging rewards the cheapest product not the most cost effective product
- ⊖ Averaging will lead to ex-post evaluation challenges as the cheapest product is adopted as **actual kWh savings are not considered** – simply an average across all products
- ⊖ The end result is a new category whose Total Resource Cost (TRC) continually falls due to incentivizing cheap products not cost effective products through averaging kWh savings.

Commercial in Confidence

## The Effect of Averaging Energy Savings Between Different Tier 2 APS

For further clarity on the effects of averaging performance across individual products and the behavior it incentivizes from manufacturers within the industry, please review the links below:

## The Problem/Opportunity

embertec®

Consumer electronics waste power in two distinct ways:

- ⊖ **Active Power Waste** where the product is on but not performing its main function (e.g. TV is on but is not being watched)

- ⊖ **Passive Standby** where power is used by the product to keep it ready to switch on

Commercial in Confidence

## Tier 2 IT APS

embertec®

Much like the limitations of Tier 1 AV APS devices where the main energy user (the TV) is not addressed, the same problem is occurring in PC environments also.

**Embertec has addressed this through the development of our Tier 2 IT APS solution which eliminates the wasted energy and poor usage patterns of the PC itself, not only the PC peripherals.**

Commercial in Confidence

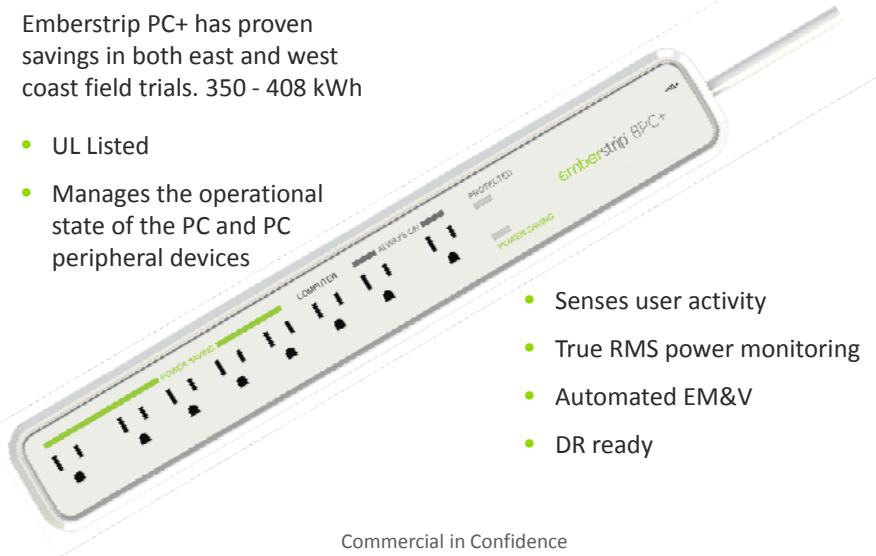

## Emberstrip 8PC+

Emberstrip PC+ has proven savings in both east and west coast field trials. 350 - 408 kWh

- UL Listed
- Manages the operational state of the PC and PC peripheral devices

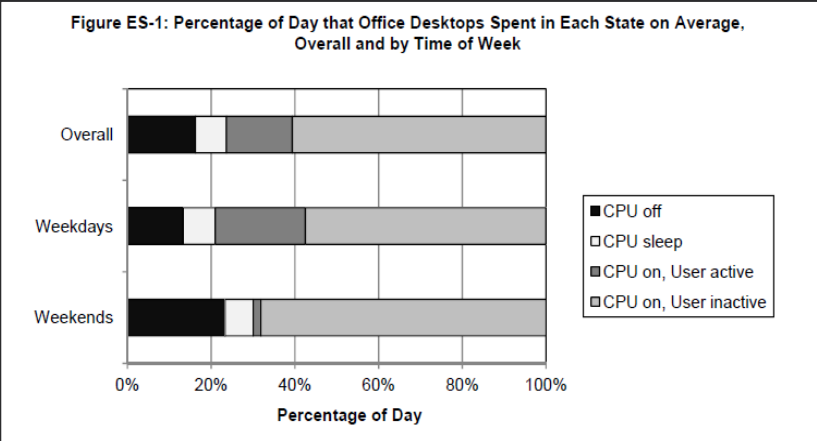

- Senses user activity
- True RMS power monitoring
- Automated EM&V
- DR ready

# SDG&E Field Trial

- Less than 3% variation in CPU usage state across CalPlug office evaluation and SDG&E field trial.
- This highlights a significant plug load management opportunity in commercial offices

Commercial in Confidence

# Emberstrip PC +

- Desktop and Laptop compatible
- Real world field trials
- NEEP/ERS Field Trial 408 kWh
- SDG&E 371 kWh
- CalPlug 350 kWh savings
- Addresses both peripheral and PC energy wastage as opposed to only addressing peripheral energy waste and standby power

DATASET	Monitored Time [Days]	Weekly Active Uptime [Hours]	Baseline Annual Usage [kWh]	Annual Energy Savings [kWh]	% Savings
Office Settings	12	19.6	621.5	494.0	79.5%
Computer Lab Settings	13	28.3	342.9	253.5	73.9%
<b>Combined</b>	13	24.0	<b>475.5</b>	<b>371.4</b>	<b>77.5%</b>

Tier 2 APS Follow Up 9/8/2015

Commercial in Confidence

# IT APS Product Comparison

The SDG&E field trial enabled a comparison between 3 types of APS device:

- Tier 1 APS – Requires the PC to be placed into a lower energy state to **save power to the peripheral devices only**
- Motion Sensing APS – Requires there to be no user activity to **save power to the peripheral devices only**
- Tier 2 APS – Adjusts to user activity automatically to **save power to the PC and the PC peripheral devices**

	Energy Reduction Percentage	kWh Saved
Tier 1	0.40%	2.1
Motion Sensing	14.70%	78.5
<b>Embertec Tier 2</b>	<b>77.50%</b>	<b>371.4</b>

# Understanding the Barriers of Energy Efficiency Program Success

- The Tier 2 APS product category will need to address market barriers to prove program performance to ensure their mainstream adoption.

1. Utility Field Trial  
Validated Energy Savings

Commercial in Confidence

## Understanding the Barriers ...

embertec®

- Gathering this level of data to prove program performance has previously been very laborious, time intensive and expensive.
- If this data could be attained quickly and efficiently to prove program performance, we could de-risk this new activity for utilities and their implementers.
- De-risking programs accelerates their adoption and drives greater energy efficiency faster and more cost effectively.

Commercial in Confidence

## Wireless Communication Features embertec®

- Installation & retention verification, with energy saving performance tracking by program.
- Utility auditing, regulatory reporting & customer communications
- **Meeting EM&V 2.0 Roadmap**
- Tier 2 APS control & adjustability for additional user convenience

Commercial in Confidence

## Communications Enabled - 2016 embertec®

- Q1 2016 - Bluetooth enabled Tier 2 APS will be available
- They will have the same Energy Saving Firmware and Hardware
- All new design for the strip, wall-tap and sensor
- The ability to validate proper installation
- Monitor retention rates
- Monitor base-loads across all products deployed in territory to validate energy savings
- Field trial capable
- A portal to communicate with customers additional utility energy efficiency offers

## New Bluetooth Models for 2016 embertec®

- A **Tier 2 APS App for consumers** to control their Tier 2 APS, change the settings of their Embertec Tier 2 APS, receive messages from their utility, and see how much energy their audio visual equipment uses and has saved are just some of the features.
- The **Tier 2 APS App for installers**, will allow the installer to validate installation, add notables regarding the install, monitor their daily installation activity, map where they have already been, determine power levels, etc.
- For program administrators, at a click of a button instant M&V, validate installation, see aggregate base load, verify retention rates, and even push messages to users, plus many additional features.
- **M&V requirements from regulators will be delivered cost effectively through Bluetooth enabled Embertec Tier 2 APS products.**

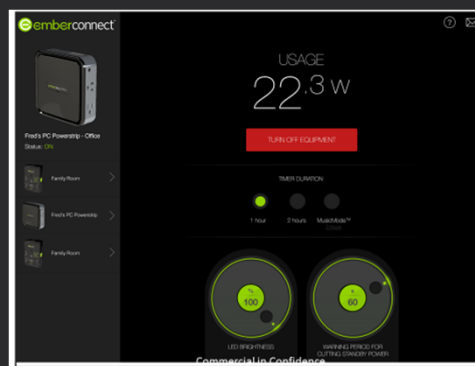

Commercial in Confidence

## Customer App Overview embertec®

- Tier 2 APS installation and user guide
- Smart device application interface across important Tier 2 APS settings:
  - LED brightness setting
  - Active power-down settings
  - Time-out settings
  - Manual Over-ride
  - Community Savings
  - Instant Messaging Support

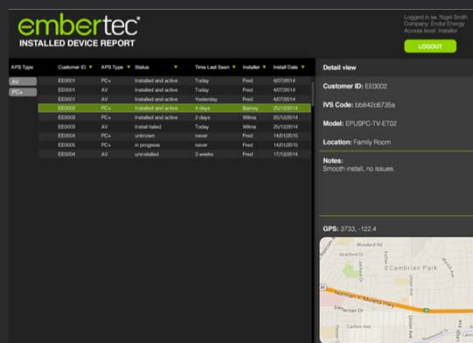

Commercial in Confidence

## Installer App Overview

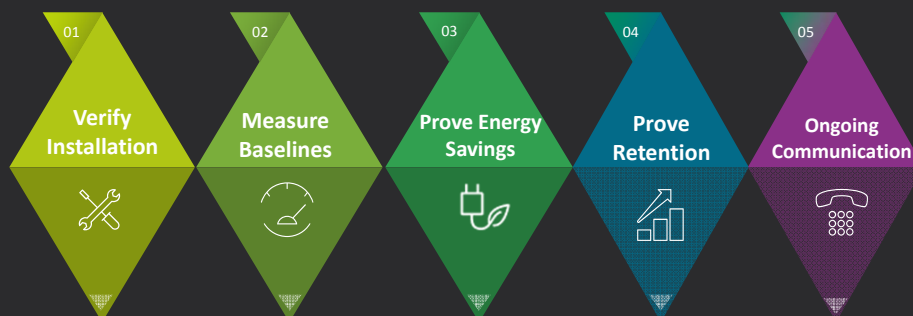

- Verifies installation and other metering parameters to an actual AV/PC environment
- Links installation to individual installers
  - Critical for program performance improvement
- Provides Tier 2 APS how to install/use videos
  - Ensures the appropriate messaging is presented to the householder
  - Fast tracks installation process lowering installation time and cost

## Emberstrip PC + embertec<sup>®</sup>

- ⓔ Cutting wasted plug load energy
- ⓔ Savings are delivered to each office environment individually, avoiding the “hit or miss” of broader IT effort control.
- ⓔ Computers and peripherals waste power in two distinct ways:
  - **Active Power Waste** where the device is on but not performing its main function (e.g. Computer and peripherals are on but not being used)
  - **Passive Standby** where power is used by peripheral products to keep it ready to switch on.
- ⓔ An ideal energy saving device would reduce both types of wastage through advanced activity sensing.

**Left on during lunch, meetings, breaks, and overnight/weekends**

< 27 >
Commercial in Confidence

## Emberstrip PC + embertec<sup>®</sup>

- ⓔ Emberplug PC+ is a software/hardware solution
- ⓔ Using Automatic Power Down™ it senses when the PC is not being used by monitoring multiple parameters and warns you of imminent energy control.
- ⓔ If no user activity it then places your PC into sleep mode and shuts power off to all peripherals in the Energy Saver sockets.
- ⓔ If the user is at their work station they simply move the mouse or hit a key on the keyboard and the sleep mode is avoided.

Embertec PC+ Software

**Power saving is about to start!**

You don't seem to be using your computer at the moment.

Your computer will go to sleep in 01:58 minutes

**To continue using your computer,**

**Move the mouse or Press any key**

## Enterprise Solution

embertec®

### Overview

PC+ Enterprise Solution creates the perfect marriage between *hardware* and *software*.

A cloud based service is then used to configure and manage all enterprise PCs, coupled with software installed directly on to the PCs connected to the Embertec PC+ unit.

Commercial in Confidence

## Enterprise Solution

embertec®

### Key Features

- Allows IT administration to centrally install, update and manage Embertec PC+ software and hardware.
- Enables PCs connected to the corporate intranet to be individually identified and optionally grouped together
  - *All PCs in a lab/office can be identified & managed together*
- Enables creation of multiple configurations (wake up sessions) to be created and then assigned to individual or groups of PCs
  - *PCs will then wake up when required for essential system maintenance and security*
- Provides a report on power usage both by individual PCs and collectively as a group such as in a lab, room, building or campus
- Enables PCs to be remotely put to sleep on demand – if the PC is not being used, thus saving additional power.

## New Bluetooth Models for 2016

- ☞ Linking communication to Tier 2 APS will unlock program success and certainty.
- ☞ During Q1 2016 our optional **Bluetooth** connected smart sensor will be available.
- ☞ This option will offer benefits for consumers, installers and program administrators given the EM&V requirements through the deployment of Tier 2 APS.
- ☞ The new 2016 **Bluetooth** models will also be a new chassis design, a sleeker strip and an 8 outlet wall-tap all with the same proven energy saving design, but with added communication.

Commercial in Confidence

## After sales support challenges embertec®

Dedicated customer support services provided by Embertec

The smart-phone application will also address other customer requirements which we have learned over time through the deployment of Tier 2 APS, including adjustment of:

- LED light brightness
- Active power-down timer
- Power-down delay accessibility

By ensuring appropriate product introduction with dedicated sales personnel you reduce the burden on after sales support requirements

We can leverage technology (smart-phone app) to address FAQ's for the customer and assist in installation and initial usage barriers where they exist.

## Knocking Down Market Barriers embertec®

- Embertec delivers another first for the Tier 2 APS category we created.
- Ongoing Tier 2 APS program assessment at the push of a button from the comfort of your office
- Many more program benefits for utilities, implementers and their customers only possible through this latest Embertec innovation.

## Direct Install

- 1 Due to the high energy savings and cost effectiveness, the **Emberstrip** has been a free measure for homeowners.
- 2 Embertec has assisted in many capacities of directly installing our product in over 1 million homes and over 2.5 million units
- 3 We train your staff to install our product
- 4 We have install partners to assist if you desire
- 5 We offer ongoing web and telephone support

< 36 >

Commercial in Confidence

## CPUC & “Direct Install Only” Status

- Only Direct Install measures have been approved at present due to uncertainty around installation rates of upstream, mid stream and down stream approaches.
- Detailed ongoing field metering will be required to validate and update ex-ante EUL and energy savings data whilst also enabling a strong IOU position on ex-post evaluations.
- This data can be easily and inexpensively attained via Embertec’s innovative communications solutions within Embertec our Tier 2 APS product range
- Communications can also be leveraged to open up delivery channels outside of Direct Install and meet CPUC rigor to prove installation at the outset
- **Embertec provides our partners with program flexibility through opening up new delivery channels for tier 2 APS due to automated EM&V solutions.**

Commercial in Confidence

## Why Embertec? - Recap

- Invented the **Tier 2 Advanced Power Strip**
- Deployed millions via direct install, multi family, single family and low income programs.
- Tried and tested firmware and hardware solutions through customer feedback from millions of units deployed
- Excellent customer service
- Full and on-going training to installers and or customer service reps
- Is the only product with proven savings from independent field trials and evaluation from utilities in US and Canada
- Embertec Tier 2 APS ensures program performance is automatically measured and field issues resolved before detailed ex-post evaluation occurs
- Embertec Tier 2 APS is a gateway to a connected home platform for the energy utility
