

# PULL THE PLUG

ON VAMPIRE LOAD

<http://calplug.org/>

Vampire Load is the energy drawn from devices when they are plugged in but the device has been turned off or is on standby mode.

Vampire Load accounts for 1% of the world's carbon dioxide emissions.

To celebrate Earth Day 2015, CalPlug is challenging all Anteaters and Friends to Pull the Plug on Vampire Power. Join us in reducing the amount of wasted electricity to create a cleaner Earth. Start **UNPLUGGING!**
